move from one end of the valve housing 201 to the other during operation because it is limited by the shaft 202 of the valve spool 200 as shown in Figure 1. Therefore, according to the present invention, the degree of freedom in designing the pressure regulating device is not degraded by lengthening the sleeve 220.

Second, according to the present invention, a length of the inner surface 203 of the valve housing 201 that must be precisely manufactured can be decreased by lengthening the sleeve 220. Support for this is found in paragraph [0026] of the specification as filed. The projection portion 224 of the sleeve 220 can be easily lengthened to achieve this result. According to Dach, the piston 2 rectilinearly moves within the housing 20 which implies that the entire moving distance must be precisely manufactured. Therefore, according to Dach, lengthening of the piston 2 would not produce a decreased length of the inner surface of the valve housing that must be precisely manufactured.

In light of the foregoing, the Examiner has not established prima facie obviousness with Dach in view of the prior art described in paragraph 005 because Dach and the prior art in paragraph 005, alone or in combination, do not teach each and every limitation of claims 1 - 7.

In view of the foregoing amendments and remarks, it is believed that the application as a whole is in form for allowance. Should the Examiner have any continuing objections, Applicant respectfully asks the Examiner to contact the undersigned at 415-442-1000 in order to expedite allowance of the case. Authorization is granted to charge any outstanding fees due at this time for the continued prosecution of this matter to Morgan, Lewis & Bockius LLP Deposit Account No. 50-0310 (matter no. 060944-0207-US).

Respectfully submitted,

Date: July 28, 2005
